Where to get your green on

KRISTA SYLVESTER

EVENTS It's Earth Day across the world and Calgarians have many chances to go green today.

The Calgary Zoo is launching their Get To Know your Wild Neighbours contest to coincide with the nationally recognized day in helping youth recognize the importance of Earth Day.

'The attitudes about nature and appreciation for animals that we foster in our children now, will determine the future for wildlife and our plan-et," Calgary Zoo CEO and president Clement Lanthier

Brandi Chuchman of the City of Calgary said you can also carry your Earth Day over to the weekend and families can celebrate together at the Telus World of Science.

"It's a chance for people of all ages to come and find out how the world is so beautiful and learn how to create sustainability," she said of the all day event.

The City of Calgary is also hosting several events. More information can be found at calgary.ca/footprint.

Happy Ear these pollinators truly make diversity — a term that,

MAGGIE SAMWAYS Metro World News

Albert Einstein famously predicted that if bees were to cease to exist, humans could last only four years after the last bee died.

A shocking estimation, but

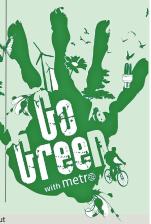

our ecosystems work.

What's frightening is that the world's pollinators, predators, prey, vegetation and oceans that we rely on for food, oxygen and water are at risk.

Which is precisely why Metro is dedicating this year's annual Green Metro to the topic of bioquite simply put, means vast variety of plants, animals and natural resources found on Earth. Like bees.

So read on — and plant a garden. Ride your bike. Remember the oceans, the bees, the worms they are your neighbours ... and our heroes.

Google mapping city streets

KRISTA SYLVESTER krista.svlvester@metronews.ca Is Google watching you?

Chances are they probably already have a photo of your street.

Metro spotted the Google Street View car snapping 360-degree photos yesterday afternoon in the neighbourhood of University Heights, and residents weren't very happy about it.

"I don't like the idea of that one bit. I think they should just forget the whole thing and leave it alone," 55-year-old area resident George Mathers said. "But they won't."

Mathers said he didn't know Google was in his area until he saw the nondiscript vehicle with a camera trolling along his street. Neighbour Sandra Smith said she is concerned about security.

The Office of the Information and Privacy Commissioner of Alberta told Metro they are working with Google to ensure privacy

Metro captured the Google Street View mapping car as it drove through Calgary neighbourhoods yesterday. The detailed, street-level imaging has some Calgarians worried about privacy and security.

breaches aren't committed.

"They said they will blur out things like licence plates and faces. People may not want to be seen in their yard, or coming out of a certain places," spokesper-son Wayne Wood said, adding Google has been in Calgary and Edmonton the

past week.

But he admitted the true test will come when Google starts posting the images, which he expects will be near the end of June. "Once the images are up and we know what we are dealing with, we can take it from there. Right now, they are just collecting the images."

spokesperson Google told Metro they abide by privacy regula-tions set out in a respective country. "We take feedback from our users seriously and they can also report images if they have concerns" she said.

Donor talk important before tragedy

AWARENESS During National Organ and Tissue Donor Awareness Week, procurement co-ordinator Tina Shaver wants people to know how important it is to have the donor talk with loved ones before a tragedy strikes.

For Calgarian Karen Venables, knowing a piece of her son was somewhere out there was the hardest part, but she knew she made the right decision to donate his organs when he

When told her 18-yearold son Devin had no chance of survival after being struck in a fight outside a Calgary bar in 2002, she made the decision instantly, but has only recently come to terms with it.

"I'll never forget that morning at 10:10 a.m., when I was told he wouldn't make it, but with my background in hospitals the decision came quickly for me," she said. KRISTA SYLVESTER/METRO CALGARY

Venezuela's top opposition leader, Manuel Rosales, has fled to Peru to escape corruption charges he says are in retaliation for criticizing Venezuelan President Hugo Chavez. REUTERS

World

An ANC election poster is seen on public toilets in the Kliptown informal settlement yesterday, a day before the South African election.

Big turnout called for at South African polls

Jacob Zuma called for a huge turnout for South Africa's election today to give his ruling African National Congress an overwhelming mandate in its toughest test since the end of apartheid.

Zuma is expected to become president after the ballot of 23 million South Africans, but the ANC risks losing the two-thirds majority in parliament it needs to change the constitution in the face of a new opposition party formed by ANC dissidents.

Election issues

• Opposition parties have been trying to capitalize on growing frustration with poverty, crime and AIDS, as well as concern about corruption.

"We anticipate a massive turnout and we expect that the people of this country will once again give the ANC a huge and decisive mandate to work together with them to further improve their lives," he said. Zuma, who had corruption charges against him dropped this month, declined to comment on his potential cabinet.

Businesses are worried Zuma may veer away from policies credited with delivering years of economic growth because he owes his rise to forces such as the trade unions on the left of the party. Zuma has said there will be no dramatic change of direction, and his room to move is limited by the global financial crisis

Sri Lankan troops move in on Tamil Tigers, 62,000 flee

CIVIL WAR Sri Lankan soldiers battled into the last redoubt of the rebel Tamil Tigers yesterday as the exodus of people fleeing the war zone reached more than 62,000, the military said.

The Red Cross warned the situation was "nothing short of catastrophic" and urged both sides to prevent further mass casualties among civilians, saying hundreds had been killed in the past 48 hours.

The military's noon deadline for the Liberation Tigers of Tamil Eelam (LTTE) to surrender passed without word from the separatists, who vowed no surrender hours later.

Sri Lanka's military, in what it dubbed the world's largest hostage-rescue operation, went in to keep the stream of people moving and give troops a clear shot at the LITE. REUTERS

Lose weight, save planet

appy Earth Day. If you're looking for something useful to do today (other than picking up a free coffee), you might try checking if you can see your toes.

It turns out the world's population is getting fatter, and that adds to the already heavy load on the planet, greenhouse gas-wise.

No, the problem is not excessive flatulence, although I

expect that doesn't help. The problem, according to British researchers from the London School of Hygiene and Tropical Medicine, is the fatter we get, the more likely we are to use our cars to get around and the more fuel those cars have to burn to haul our sorry butts around.

There is no doubt the species is increasing in bulk. Between 1994 and 2004 in England, the average body mass index (BMI) increased from 26 to 27.3 for men and 25.8 to 26.9 for women. I regret to report that anyone with a BMI of more than 25 is considered overweight, and over 30 is obese. In Canada two-thirds of the population is overweight and one-quarter is obese.

The British researchers es-

timate one billion lean people will emit one billion fewer tonnes of carbon dioxide a year than one billion fat people.

So how's that for an incentive? Lose weight; save the planet.

I confess I've been inadvertently saving the planet. I started losing weight this January when I realized there was no way I was going to run the Vancouver Marathon in time to qualify for the Boston Marathon, the Holy Grail of marathons, if I continued to weigh in at a porky 205 pounds. So now

I weigh 179, with a BMI of 24.3. Mother Earth has yet to send me a thank-you card even though I check the mail every day, but I guess she's pretty busy shouldering the increased load.

OK, maybe she won't notice the reduction, but you've got to start somewhere. I have to admit I haven't felt this, uh, bouncy in years.

So Canada, I dare you. Take the challenge: Look down. No toes? Then it's time to get off the couch, get out of the car, and put one foot in front of the other. Take a load off Mother Earth ... and yourself.

EARTH DAY CANADA

EDITOR: MIKE.DEREZYCKY@METRONEWS.CA

Message from Metro CEO Per Mikael Jensen

To our readers,

We are the world's largest newspaper and whatever we do can impact — every week — 37 million people on four continents.

There are things that only the world's global newspaper can do. Go Green is a great example and Metro is proud to embrace such a huge cause. And what is Metro do-

ing to Go Green? The philosophy behind the Metro business plan lends itself to be more green than its paid-for colleagues. Our aim is to reach as many readers as possible with the minimum amount of copies as opposed to that of a newspaper, paid-for where the number of copies is the key, not readers.

We print our editions on recycled paper when we can — all of our southern European editions are printed on 100 per cent recycled paper — and when we can't, we buy paper from special farms that use less water to grow their trees. We are the news in brief: It takes us fewer pages to bring you all the news you need to read. We turn down the AC and the heat; we put our lights on special timers so they shut off when they can't detect

Additionally, we've begun to explore cycling distribution and test pilot programs to increase our reach without printing more copies.

In addition to our internal and corporate efforts to be greener, as a mass media outlet, Metro can use its powerful reach to pull together our readers

will to be green into real action by providing resources, information and communities that encourage a greener world. And our readers are ready to Go Green from across Canada, to Santiago, to New York, to Prague; Metro will be the booster.

Today's special edition is the first step.

Join us. Go Green with Metro and feel free to join the Facebook group of the same name.

> KIND REGARDS, PER MIKAEL JENSEN CEO, METRO INTERNATIONAL

Vin-ners and losers

The changing face of wine regions

USA and Canada:

California may become too hot and too dry to produce quality wine. The same goes for Yakima Valley in Washington. The East Coast looks as if it could benefit. The same goes for British Columbia and it's Okanagan Valley.

South Americas:

Both Chile and Argentina are considered winners. The cooler sea currents in the southern hemisphere will be to their advantage, and wine growers such as the well-known Miguel Torres from Spain are buying land here.

Africa:

South Africa looks as if it will suffer less from global warming than most places. However, wine growers are looking to move to the mountains.

Australia, New Zealand: Many districts are becoming too hot and too dry Some of the wine growers are moving to mountainous

Tasmania where the climate is cooler. In New Zealand, Central Otago on the South Island could become the world's possibly southernmost wine district.

Europe:

warmest places are in trouble. Spain and Portugal are predicted to be those most likely to suffer. Major wine growers such Miguel Torres in Spain are moving into the Pyrenees. In districts already affected, growers contemplate exchanging the Tempranillo with other grapes more suited to warmer climates. Italy, too, is suffering, especially

advocate irrigation, which is now banned, to save vineyards in Tuscany for instance. In France, it looks as if the west and the south will be affected the most. Growers are moving into higher regions, when possible, or buying land in other countries. For instance, winemakers from the famous Champagne District in France are moving across the English Channel, buying into the chalky regions of southern England. The British Isles are basking in the sun, winemakers are multiplying, the same goes for the amount of land taken up by vineyards. Southern England could be the Champagne District of the future, some experts pre-

places in the south like

Sicily, Some local experts

Other countries:

Denmark, Sweden, Finland and other countries around the Baltic Sea have so far only had amateur enthusiasts involved in winemaking. But now it is becoming commercial, with some of the wines actually exported to buyers in other countries. However, these countries will possibly still be too cool for large productions, rather they will produce interesting quality wine in small amounts

As surprising as it may seem, China is already the seventh largest wine pro-ducing country in the world. And some experts have their eyes on an area northwest of Beijing as one of the most promising - wines from here already prizes at international fairs. So get used to names like Changyu, Dragon Seal, Great Wall or Dynasty.

> SOURCES: ASSOCIATE AND CLIMATOLOGIST **GREGORY JONES**

How nature can inspire design

Nature has always inspired mankind. Leonardo Da Vinci and the Wright brothers looked at birds in flight to inspire their flying devices.

In the same way, Swiss inventor George de Mestral created Velcro in 1948 by analyzing the burrs stuck to his pants and to his dog's fur after a walk in the countryside.

Today, this science has a name: Biomimicry, a word coined by American re-searcher Janine Benyus, published Biomimicry: Innovation Inspired by Nature in 1997.

'Biomimicry, or biomimetics, is all about look-

"The natural world is full of hints on how to manufacture in life-friendly ways."

Researcher Janine Benyus

ing to nature for inspiration and borrowing nature's blueprints, its chemical recipes and ecosystem strategies," says Benyus.

"Why reinvent the wheel when we have optimal solutions in nature that have benefited from 3.8 billion years of field testing and natural selection?"

This idea actually appeals more and more to companies that are trying to find solutions to problems nature has been dealing with since the dawn of life, such as minimizing energy use and manufacturing without toxins.

The natural world is full of hints on how to manufacture in life-friendly

ways," says Benyus. Nature is full of examples of adaptation, so when we now talk about the extinction spasm, we're talking about losing wisdom, ideas that we

would not normally have thought of," says Benyus.

We can no longer take this wealth for granted. That's why the Biomimicry Institute has initiated a program called Innovation Through Conservation, asking companies to donate a percentage of their proceeds to conserve the habitat of the species they took inspiration from.

Biomimicry proves once more that the loss of biodiversity is a lot more than an animal lover issue.

Greetings, Earthlind

Founder of Earth Day comes clean on being green

Denis Hayes is the man who made Earth Day a world phenomenon. When Earth Day was launched in 1970, Hayes was its first co-ordinator and turned the environmental day into a series of events attended by 20 million Americans. Twenty years later, Hayes launched the first international Earth Day. Result:

Denis Haves speaking at the first Earth Day event in 1970.

200 million participants in 141 countries. Today, he heads Earth Day Network, which co-ordinates Earth Day activities around the world.

Can the world become greener through a one-day

"In 1970,

event? Of course not! We have no illu- most people sions about that. What didn't even we were doing in 1970 **think about the** erates. S was to get

people from **environment.**" very different quarters to act together on problems like lead paint and highway construction. Today, too, people have to recognize that

environmental problems don't stop at borders. We should start thinking of ourselves as one species.

Has the world become greener since 1970? The United States has become substantially

cleaner. We've cleaned up rivers and lakes and saved endangered species. But the world is in poorer shape than it was in 1970, in almost every aspect.

What is Earth Day's biggest accomplishment? 1970 to '74

was the golden era. We passed the environmental laws on which society still op-erates. Since

biggest accomplishment has been getting

millions of school children involved. Environmentalism has become a part of society. In 1970, most people didn't even think about the environment. Now, it's part of everyone's vocabularv.

What will the next environmental crisis be?

The growing acidification of the world's oceans. It has devastating effects on

the smallest organisms, which will have tragic consequences on the whole food chain, including humans.

What is the most immediate environmental danger today? Carbon emissions

What is the most important thing people can do to help the environment?

Have no more than one child, or two at most. Live in an energy-efficient house. Walk and ride your

Bees

Scientist Albert Einstein famously said: "If the bee disappears from the surface of the Earth, man would have no more than four years to live. No more bees, no more pollination ... no more men!"

Excessive pesticide use in North America has led to a decline of up to 50 per cent of managed colonies of honeybees.

Crops such as apples, pears and berries depend entirely on pollinators for fruit production.

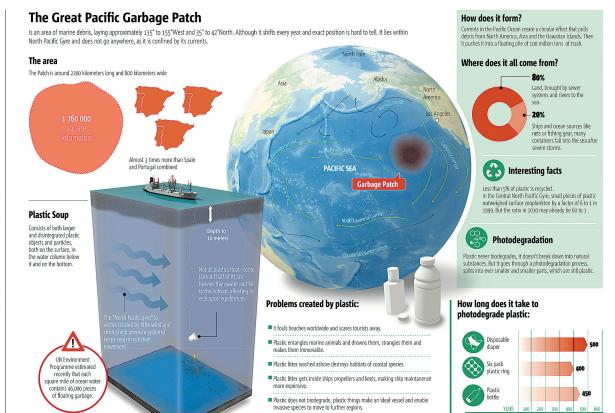

SOURCE: BUMBLEBEE.ORG

Coral reefs

Coral reefs provide goods and services worth about \$375 billion each year yet the coral ecosystem covers less than one per cent of the Earth's surface.

In fishing, both the food and marine ornamental trade are often caught using cyanide, which stuns fish for easy capture. Cyanide kills the coral and many other coral reef organisms such as coral polyps. Less than half the fish caught with cyanide survive long enough to then be sold to restaurants or aquariums.

More plastic than plankton

Our oceans are covered in patches of garbage as big as a continent

At the heart of the oceans, areas as big as France, maybe more, are covered in garbage.

The most famous of these is the Great Garbage Patch, discovered in the late 1990s in the North Pacific Ocean between the United States and Asia. But it seems that another seven similar patches may exist, according to Seattle oceanographer Curtis Ebbesmeyer, one of the first scientists to take interest in the strange routes of plastic trash in the sea.

In his new book, Flotsametrics and the Floating World: How One Man's Obsession with Runaway Sneakers and Rubber Ducks Revolutionized Ocean Science, Ebbesmey-

"From a boat, you start seeing everyday objects like toothbrushes and plastic bags on the outskirts of the vortex."

François Chartier, oceans campaign director at Greenpeace France

er explains his "science of floating objects," or "flotsametrics."

By observing trash on beaches, such as Nikes or rubber ducks, he identified several circular currents, or gyres, which, like whirlpools, bring together all the plastic and other solid garbage that ends up in the seas around the world.

Ebbesmeyer says the patches of debris may cover a surface "equivalent to several times the United States."

However, the garbage

patches are still unrecognized and neglected because they are basically difficult to see.

"From a boat, you start seeing everyday objects like toothbrushes and plastic bags on the outskirts of the vortex," explains François Chartier, director of the oceans campaign at Greenpeace France, the organization that revealed the existence of the Great Garbage Patch to the media.

"When you approach the centre of the patch, the trash is thicker and some birds have actually started nesting on it."

But from the sky, even from satellites, there is "nothing to be seen," says Ebbesmeyer. "It's like tracking a ghost!"

Invisible plastic? Not really. The fact is that most of the pieces are quite seethrough, like plastic bags. Others are fractions of bigger pieces of plastic that have disintegrated into bits as small as plankton.

"In the middle of the patch, there is six times more plastic than plankton." Ebbesmeyer says

This accumulation of plastic in the oceans is a serious menace for the environment and for human health.

"Dolphins suffocate on plastic bags, birds can die of hunger because their stomach is so full of undigested plastic that they can no longer eat," says Chartier.

But plastic also contains toxins (PCBs, heavy metals) that are harmful to humans and that are assimilated by plankton and other fish, which end up in the ocean's food chain, and, consequently, in your seafood chowder.

Worms provide vital services to mankind such as working land ... and fighting against global warming

What would we do without worms?

'When we talk about biodiversity, we never really mention worms," says Denis Loyer, deputy director of the French Development Agency (AFD). "But they actually have an essential role in producing food.

Without worms, there would be no fertile lands. Worms are actually one single long digestive tube. Feeding on organic waste, they end up excreting a powerful natural fertilizer. That's how compost heaps

pesticides can be harmful to these hardworking animals, it is surprising to discover that what is really bad for them working the land. Worms are killed by birds and by the lack of food, while UVs finish the job by destroying all other micro-

scopic life in the soil.
"The difference is enor-Where land is mous. laboured, you can find up to 50 kilograms of worms per hectare against two to

"When we talk about biodiversity, we never really mention worms,"

Denis Loyer

four tonnes on nonlaboured agricultural exploitations," says Loyer. Today, many soils are biologically dead, with no more than one per cent of organic substance.

Chemical fertilizers feed plants but do not rebuild the natural capital of soils. Moreover, worms dig tunnels in the land that allow water to penetrate deeply instead of washing away wastefully — or worse, causing floods. This is why a non-laboured agriculture

is being hailed as the future solution to feeding the world.

"A project we have in Tunisia shows that the farms are just as efficient, but have reduced costs thanks to less labour and less chemicals. Moreover, in dry countries, stocking water in the soil is very imporadds "This tant, Loyer. kind of agriculture growing by 15 per cent per year."

That's good news, and not for only worms. As a matter of fact, some climate change experts believe creatures will also be on the front line tackling climate change.

One worm may be like

Darwin & worms

• British naturalist Charles Darwin should be remembered for more than his theory on the evolution of the species. The last book he published in 1881 shows how, by many means, he was ahead of his time. With The Formation of Vegetable Mold Through the Action of Worms, he opened the doors of science to a seemly insignificant species: The worm. He had friends and scientists send him samples of worm waste to analyze the benefits of this organic fertilizer. He took his job very seriously and also studied their behaviour - he even played the piano to them to test their hearing. Worms are actually deaf.

these shy

CALGARY

Look after the planet and look after yourself

ost of us see trees, gardens, maybe even some fields or a river during our daily commute. Even in the busiest city, we can enjoy some contact with nature. Whether we live in a great rain forest or an urban apartment, our livelihoods and our lives — depend on keeping the planet's biodiversity in good shape.

he truth is, we've spent our natural capital like there's no tomorrow and now we're faced with the bill. Just as irresponsible borrowing and spending got us into the present economic recession, so we've been piling up ecological debt by consuming and wasting more and more natural resources. If you think the economy is in bad shape, take a look at the planet.

WF's Living Planet Report tells us that three-quarters of us live in countries that are ecological debtors — using up resources faster than nature can replace them. If we carry on consuming at our current rate, by 2030 we'll need the equivalent of two planets to maintain our lifestyles. Over the past 35 years alone, we have squandered nearly one-third of the Earth's biodiversity. Not only is this hugely damaging for the environment, but it doesn't make any economic sense. One recent report estimates that forest ecosystems alone are worth around \$28 billion a year — and a lot of that money is literally going up in smoke.

"The truth is, we've spent our natural capital like there's no tomorrow and now we're faced with the bill."

s we increasingly worry about jobs and mortgages, we may be tempted to ignore the bigger picture. But Amazon deforestation, hungry polar bears and over-fished tuna are a challenge for all of us, because protecting natural resources means better food and water security, better human health and a better chance of fighting climate change.

he good news is — we know what needs to be done and we can afford it. We have a unique opportunity to use the trillions of dollars in stimulus packages to create a green global economy that could lift us out of recession, protect natural resources and tackle global warming. The first step is to agree to a fair, fast and effective global deal on climate change in Copenhagen this December. Then, in 2010 — the International Year of Biodiversity — the UN must lead the rest of the world in taking bold steps to reduce consumption and stop biodiversity loss within 10 years.

arth Day is a good time to think about our shared responsibility to consume and sustain the planet's natural resources wisely — after all, it's in our own interest.

Interest rate cut to 0.25%

The Bank of Canada took markets by surprise by cutting its benchmark interest rate to a historic low of 0.25 per cent yesterday and saying it was prepared to keep them there for another full year in an aggressive bid to spur a slumping economy.

The central bank, in an unusual move, told markets directly to expect rates to stay at the current level until the end of the second quarter of 2010, assuming inflation remains tame.

It also cut its economic growth forecasts to reflect its view that the Canadian recession will be deeper than it had previously predicted. It now sees recovery starting in the fourth quarter of this year and not the third quarter, as it predicted in January.

"I think that they are trying to engineer confidence in Canadian households and businesses that interest rates are going to stay low for the foreseeable future."

Aron Gampel, Scotiabank

Nonetheless, it suggested that the cumulative rate cuts it has made since December 2007 may be sufficient to help turn the economy around, and that it may not have to print money to buy securities in the market, a policy known as quantitative eas-

It will, however, set out a framework tomorrow for that kind of unconventional policy.

majority of primary securities dealers had expected rates to hold steady.

"Committing to keeping (rates) there for the next year is quite a startling revelation," said Aron Gampel, deputy chief economist at Scotiabank.

"It reflects the concern

formed Evergreen Sports Programming with former Saskatchewan Roughrider Dustin Cherniawski.

The company focuses on delivering an environmental message by using football players as their spokespersons. The keystone activity of their company is the GreenZone Sustainability Blitz — Speaker Series.

"We focus on three pillars of sustainability: reduce, reuse and recycle." said Radlein.

B.C. Lions linebacker Javier Glatt spent his off-season presenting the Sustainability Blitz program to schools across B.C. Glatt feels the high-energy activities of the program help to make it popular with children of different ages.

"We always start with a pep rally where the whole school comes together. There are environmental games that have students competing against the athletes. We have a water relay, energy challenge and waste relay. It is funny how the students always seem to win."

Glatt tries to deliver his message in a language the students understand.

"When I speak to schools in Vancouver, I always ask the students to imagine if they could not see the

Julian Radlein started Evergreen Sports Programming.

mountains due to smog. Also, I talk about the importance of clean air and fresh grass for things like recess. When you start talking about recess being in jeop-

ardy, all the students immediately listen."

The GreenZone Sustain-

ability Blitz is currently being presented in B.C., Alberta and Ontario.

Canadian outdoor NHL game? Only in Alberta

he word is out that the NHL's next outdoor game will take place next season at Fenway Park in Boston. And with it, comes complaints from up here that the league is avoiding holding one in Canada.

Yet the reason is simple. At this moment, there is only one outdoor stadium in this entire nation that seats more than 40,000 people — Commonwealth Stadium in Edmonton, the very field that hosted the NHL's first outdoor venture in 2003.

While it might make you feel warm and fuzzy to imagine NHLers taking the ice at Montreal's Percival Molson Stadium or Toronto's BMO Field, these games aren't staged to make the league feel warm and fuzzy. They are staged to maximize profit, and that (and that alone) is the only reason they are staged. When you sell 40,000 tickets to a hockey game, you double your gate in addition to swelling TV numbers.

Aside from Commonwealth, McMahon Stadium in Calgary is the only current outdoor venue in the country worth doing it in.

country worth doing it in.
With 36,000 seats, it's
17,000 more than the Pengrowth Saddledome (and
only about 2,000 smaller
than Fenway).

BMO? Twenty thousand, or merely 2,000 more than the Air Canada Centre. Similar story with Molson Stadium and the Bell Centre

The Big Owe? Sorry, the roof's screwed on tight now. The Rogers Centre? Sorry, no on-field drainage system. The retractable-roofed version of Vancouver's B.C. Place? Possible, but unbuilt as of yet.

Some corners have said the Ottawa Senators could play a game on the Rideau Canal. My advice to them would be to not smoke marijuana before making suggestions where the Ottawa Senators play outdoor games. A frozen waterway with 40,000 temporary metal seats? That's even more temporary seating than most Grey Cup games.

And anybody think about the luxury suites? It's doubtful Eugene Melnyk or any other owner would look the other way on that sweet action.

John Chick is Metro Canada's sports editor. john.chick@metronews.ca

INFORMATION FEATURE

Nature, Disney-Style

Disneynature revives tradition of documentary excellence By Lori Dance

eeking to capitalize on the recent success of nature documentaries, Disney looked back at its own long-dormant True-Life Adventures division—which not only garnered eight Academy Awards from 1948 to 1960, but also fostered fond memories for generations of schoolchildren—to inspire the first Disney-branded film label in over 60 years.

"Nature invents the most beautiful stories," says Jean-François Camilleri who, besides having been involved with the Academy Award-winning film March of the Penguins, is executive vice president and general manager of Disneynature. "So in a place like the Disney Studios, where storytelling is key, we are going to go and... bring them to the big screen. This was a vision of Walt Disney back in 1948, and this is the vision of Disneynature today."

Director Alastair Fothergill

For its first film, EARTH, the Disneynature team looked no further than directors Alastair Fothergill and Mark Linfield, the creative team behind the Emmy Award-winning Planet Earth series, for assistance. "I think EARTH is a perfect film to start the Disneynature series... because it is a portrait of the whole planet," Fothergill asserts. "In over five years, we filmed at over 200 locations in 64 countries worldwide and

employed 60 cameramen... Nobody in the history of cinema has ever had so much time, resources, and talent brought together for one true-life feature."

Nature invents the most beautiful stories

Disneynature is developing numerous titles concurrently and plans to release at least one feature-length documentary each year. Oceans, slated for 2010, will rely on new technology to capture detailed underwater drama where few have previously ventured. Big Cats, to be released in 2011, follows three species as they protect and teach their cubs on the great plains of Africa. And the directors of EARTH will reunite for 2012's Chimpanzee, shot over three years in the tropical jungles of the Ivory Coast and Uganda.

Three Families, One EARTH

Disneynature's first film explores the animal kingdom from pole to pole By Lori Dance

n April 22, Disney will celebrate Earth Day with the premiere of the first film in its Disneynature series. Narrated in thrilling detail by James Earl Jones, EARTH follows the journeys of three animal families as they interact with the ever-changing world around them.

On a group of Nordic islands is where you'll meet the polar bears. The world's largest land predators travel hundreds of miles for something to eat, yet they don't drink water. A male ventures far to hunt as a mother emerges from a snow den with her two cubs. The pack ice melts earlier each year, and food is becoming a challenge.

To visit the next family, you'll travel far south as an elephant mother guides her tiny calf across the Kalahari Desert in search of fresh water, of which an adult can drink 50 gallons each day. In this dry season, however, thick clouds of dust threaten to separate them, and they are forced to share what little refreshment they find with hungry lions.

Finally, you'll witness an epic 4,000-mile migration. In tropical waters, a humpbacked whale calf receives over 600 quarts of milk each day, but its mother is starving. The pair set out on the longest journey undertaken by any marine mammal to the southernmost Antarctic waters to feed on krill and small fish before they turn around and journey back to the Equator.

The supporting cast of this story includes, among over 40 other animal species, some painfully adorable mandarin ducklings who, at their mother's urging, fling themselves 30 feet from their nest to the ground. Will they fly? Will they bounce? You'll just have to wait until Earth Day to find out...

To check out more exclusive and super-cute behind-the-scenes footage of the film's three main families, visit disneynature.com/earth.

Trees for Tickets

Plant yourself in front of EARTH, and Disneynature will plant a tree on Earth By Lori Dance

Disney and Metro have a convenient truth for you: for every ticket purchased during the opening week of EARTH, being released across North America on Earth Day (April 22),

a tree will be planted in your honour.

"We couldn't think of a better way to launch the new Disneynature banner, and to celebrate the spirit of the film and Earth Day at the same time," says Dick Cook, chairman of The Walt Disney Studios.

Trees will be planted in the Brazilian Atlantic Forest which, at only 7 percent of its original capacity, is considered the most endangered rain forest in the world. Disney is overseeing their planting and care, and Metro is contributing advertising space to support the program.

> For more information, including ticket availability at your local theatre, visit disney.com/earth.

Toyota Prius gets overhauled

Hybrid aims to win hearts of masses without compromising green thinking

ROB BEINTEMA

I'm standing on the gas, the pedal flat to the floor and that's where it's gonna stay, fuel economy be damned.

We're leaving the flats of the Napa Valley, spiraling up into the Mayacamas, trees and rock face blurring past, engine moaning, tires gripping nicely, only the oc-casional peep-peep-peep of traction and stability control warnings as I go into a hairpin corner too hot, you know, one of those corners where you almost have to look behind yourself to see where you're going. Then, back on the gas and we are clawing towards yet anoth-

er curve on the mountain

And, no, you're not read-

ing the wrong story.
This is the 2010 Toyota Prius, the third and latest generation of the fuel-efficient, low-emission hybrid dear to the hearts of 14,000 or so environmentally-sensitive Canadians who have bought one since its intro-

duction a decade ago.

To build a car that appeals to a broader audience while staying true to the environmental tions of the faithful, over 2000 engineers worked on a product that boasts a long list of firsts along with over 1000 patents.

The 2010 Prius starts on MC platform shared with Scion XB. The previous Prius had all the soulless enamor of a science project econo car trappings and no-nonsense trim topped by a utilitarian little shifter sticking awkwardly out of the dash. The 2010 Prius is a dri-

ver's car, with true cockpit feel courtesy of a raised console in "freeform geometric design," mounting a handsome little shifter that's so cute you just want to hang onto it. The layout complemented by sporty oval steering wheel,

graphic displays, soft touch padded materials, more comfortable seating and a leaf pattern grain texture on dash, door panels and fabric.

But enough about looks, let's get to the meat of the matter.

The Prius' Hybrid Synergy Drive is ninety per cent new for 2010. Unlike most other hybrid vehicles available, Prius has always been "full" hybrid, allowing it to run on engine alone, battery alone, or both.

The powertrain improve-

ments start with a bigger 1.8-litre DOHC gasoline engine. Other improvements come with the new engine, a lighter electric motor and generator, improved cooling to components, more compact battery packaging, a lighter transaxle, an improved CVT transmission and, importantly for Canada, an exhaust heat recovery system that was wintertested in Timmins, Ont., and that proved to provide quicker warm-up and bet-ter cold weather fuel effi-

The net result? Twenty-

2010 **Toyota Prius**

Type: Mid-size hybrid sedan Price: Not available Engine: 2ZR-FXE 1.8-litre VVT-I DOHC four-cylinder with electric motor assist (134 hp / 105 lb-ft of torque). HP: 3.7/4.0/3.8L/100km (city/hwy/comb)

two per cent more power and seven per cent less fuel consumption. The 2010 Prius is rated at 3.8L/100km combined, better than the 4.1L/100km rating.

Car Insurançe Is Now On SAI

The truth is, car insurance has always been on sale, you just didn't know it. You may have been overpaying for your car insurance for years and simply didn't realize that you could get a better deal.

InsuranceHotline.com can show you how to reduce the cost of your car insurance without reducing your coverage. It's like getting the same thing you already have, but at a much cheaper price... just like a sale!

What's The Catch?

There is none. The fact is rates charged by different insurance companies to insure the same driver, with the same car, for the same coverage, can vary by hundreds and even thousands of dollars. The key is finding the one insurance company that can offer YOU the lowest rate available for your driving profile. So it pays to shop around. Fortunately, InsuranceHotline.com can help by searching the rates of over 20 insurance companies to find you the lowest rate available, guaranteed.

What Are You Waiting For?

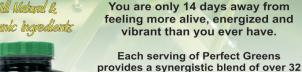

There are thousands of people who have taken advantage of the 'sale' and have saved hundreds to thousands of dollars on their car insurance using InsuranceHotline.com.

So if you are keen to save big on car insurance, why not give InsuranceHotline.com a try?

For the 3 lowest rates from over 20 major insurance companies, go online to InsuranceHotline.com

Fun heart of Soul

Kia impresses with new compact SUV

EMMA E FORREST Metro World News

One of several new boxy cars coming out, this new Kia is not just full of soul, it's stylish and it's also a huge amount of fun.

The Korean carmaker's compact SUV is its most distinctive design yet and set to be a trailblazer for the brand.

New design director and Audi TT designer Peter Schreyer has produced a striking car with faux-4x4 2010 **Kia Soul**

Type: Compact SUV Price: from \$15, 495 Engine: 1.6 litre HP: 124 bhp

Highlights

Wallet-friendly, eco-friendly off-roaderFun to drive

credentials. It has boxy looks along the same lines as the Nissan Cube, Honda Element and Scion xB, is

high off the road and it also offers the same in-town practicality as a 4x4, but is obviously cheaper to buy and far more economical—and ecological—than a real off-roader.

There's a selection of fun coloured exteriors and original interiors — including a dogstooth pattern. There are three special editions including the Diva and Samba, but it's the Soul's Burner that's the bomb — this bad boy comes in black with red highlights, a dragon design

on the outside, hot black wheels and a flashy red and white interior.

This model also has a brilliant feature — red lights in the speakers that flash in time with the mu-

sic you're listening to.

These things are essential for the type of driver that Kia expects to appeal to, a young, urban crowd like you, who will want to ferry their friends around

and maybe not mind so much that the boot won't fit more than one baby buggy. It all adds to the fun experience of driving this car — it feels solid, but is also nippy and agile.

Carbon fibre catching on

t first blush the just-released Mercedes-Benz SLR Stirling Moss might not appear to be the ideal subject to discuss today ... to-

day being Earth Day.
Some of you might even suggest that such an extravagant vehicle shouldn't even be built in the first place. Well, you sort of have your wish, because they're only making 75 of them. There, happy now?

But everyone and everything has a part to play in moving towards more Earth-respectful human mobility — even, surprisingly, a \$500,000-plus sports car that can only carry two people and about 18 minutes worth of luggage.

The part played by this, and the other models in the SLR range (roadster and coupe), is advancing the use of carbon fibre in "mass produced" production vehicles.

Carbon fibre is incredi-

bly strong and stiff for its weight. As such, it's become the material of choice for such things as hockey sticks, tennis and badminton racquets, and now bicycles frames. (I play a bit of hockey and badminton, so when they get

around to making

"Carbon fibre is incredibly strong and stiff for its weight."

a beer bottle out of the stuff, I figure my leisure time will be carbon-fibre complete.)

Its strength comes from the way it's made — strands are layered and woven together in specific patterns, and each time out, it's done differently, to precisely fit the task at hand. Not dissimilar to the way Mother Nature goes about building her stuff.

But such a customized and fussy process, adds much cost and time. And the raw material for carbon fibre is already way more expensive than aluminum or steel.

The SLR is unique not only because its body panels are made of carbon fibre, but also its super-structure. This body shell is made by McLaren — the same firm that builds McLaren F1 racing cars. F1 is where all the big envelope pushing gets done, when it comes to carbon fibre and four wheels.

Mercedes and McLaren have developed material and process systems to speed up both the creation and assembly of carbon fibre components. The team dustry, as some of the automated systems resemble weaving machines.

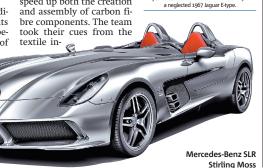

High heat areas, such as engines and exhausts, will always be made of metal for the foreseeable future, but how about everything else?

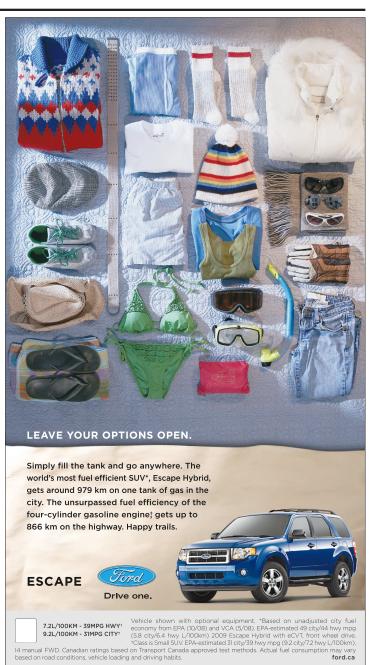

In an email interview, James Banks, Mercedes' body function manager, said, "It is quite feasible that small structural parts could start appearing on production cars within the next few years ... Personally, I believe carbon fibre crash systems and class A bodywork are the two areas of the automobile that are likely to see the biggest advances in the coming years."

When this does happen, it will be another example of trickle-down technology, in the constant pursuit to make all cars safer and lighter and more fuel-efficient.

And if you have to build something high, to get the necessary gravity, you could do worse than this gorgeous SLR, built as a homage to the original SLR that racing legend, Stirling Moss, which famously drove to a succession of victories in 1955.

Michael Goetz has been writing about cars and editing automotive publications for more than 20 years. He lives in Toronto with his family and a neglected 1967 Jaguar E-type.

AWARD The all-new Volkswagen Golf edged out the Toyota iQ and the Ford Fiesta to bag the 2009 World Car of the Year title at recent the New York International Auto Show.

The sixth generation Golf made its first appearance at the Paris Motor Show last fall, and was unveiled in North America at the Canadian International Auto Show in Toronto this February.

The new Golf will be coming to Canada this fall as a 2010 model.

Honda's FCX Clarity took home the eco-friendly honours in New York as it was named the 2009 World

Green Car.

The FCX Clarity, a sleekly styled hydrogen fuel cell-powered sedan currently available on a limited leasebasis, is powered by an electric motor that runs on electricity generated by an on-board fuel cell stack.

The vehicle's only emission is water, and its fuel efficiency is up to three times that of a modern gasoline-powered automobile and two times that of a gasoline-powered hybrid

vehicle.
The World Green Car awards were inaugurated in 2003, and officially launched in January 2004.

METRO NEWS SERVICES

FCX Clarity, Golf honoured Putting brakes on teens

JIL MCINTOSH for Metro Canada

When your teenager takes out the family car, you may not always know where he is. But thanks to Ford's new MyKey system, you'll have a better idea of what he's doing.
Debuting on the 2010 Fo-

cus and planned for several more models, MyKey is a no-charge standard feature that limits the car's top speed, prevents the traction control from being disabled, chimes warnings at pre-set speeds, encourages seatbelt use, and caps the volume on the audio system. It works through the message centre in the instrument cluster, and is invisible to drivers who don't want to use it.

Parents program keys through the ignition, turning them into "MyKey keys." These trigger the preset system when they're used to start the car, limiting what the vehicle will

One key always remains the "administrator," and is used to program others; it also lets parents operate the vehicle without limits.

The MyKeys can be wiped clean or reprogrammed at any time, if desired. Any microchipped key can become a MyKey, whether it's one of the keys that comes with the car, or purchased from the dealer.

Starting the car with a MyKey always triggers three automatic defaults. The regular seatbelt reminder chimes, but the stereo won't work until the driver has buckled up, as well as any front-seat passenger. The low-fuel warning comes on at 120 km to empty, rather than the usual 80 km notice. And if the vehicle is equipped with special safety features such as Park Aid or the new Blind Spot Information System, these can't be disabled by the driver.

Beyond those, parents can also program in speed alert chimes at 72, 88 or 105 km/h; the inability to disable the traction control; a limit of 44 per cent of the stereo's volume; and a limited top speed of 130

And if your teen's a technology wizard, fear not. 'The system tracks the kilometres, and so the parents can see if the MyKey is being used," said Kerri Stoakley, Ford's communications manager.

"Buckle up, watch your speed, and turn down the radio are the three things parents ask," Stoakley said. "So mom and dad might give more seat time with the system. It's a good reminder to children that they need to drive

Keep on truckin'

Silverado Hybrid paints the pickup green

JIM ROBINSON for Metro Canada

There will always be a sun-

There will always be an England.

And there will always be pickup trucks.

Sure, truck sales are off but an interesting thing is happening south of the border, and to a lesser extent here. Pickup truck sales (but not SUVs) are on the upswing.

As soon as the price of fuel started to drop, Americans began buying pickups again. So it turns out it's the cost of fuel, not vehicle price, that's a determining factor in truck purchasing.

And, frankly, when Prime Minister Stephen when Harper's federal infra-structure money starts starts flowing, people won't be hauling wallboard and cement mixers to the job site in Honda Civics. They're going to need a

Type: Full-size SUV Price: Base, \$50,875. As tested, \$52,445 including \$1,300 shipping fee Engine: 6.0-litre, DOHC V8/electric motor (332 hp, 367 lb/ft)

Highlights

- Affordable hybrid system for a pickup
- Many standard features

However, there is still the uncertain cost of fuel. So the question is whether or not you can have your pickup cake and eat it too.

General Motors is alone in offered a full-size hybrid pickup that can tow up to 6,100 lb and get up to 9L/100 km on the highway. I know because I did it.

GM's green trucks are based on the 2-Mode Hybrid System currently found in the GMC Yukon

Green

and Sierra, Chevrolet Tahoe and Silverado (tested here) and Cadillac Escalade.

This is a "full" hybrid system, in that it can operate on electric power, gaso-line power or a combination of both for a claimed

saving of up to 25 per cent. While the GM Hybrid system is one of several affordable hybrid technologies, it is the most adaptable for large vehicles. In fact the 2-Mode hybrid system was adapted and re-fined from the hybrid technology GM has used in city buses since 2003. It is now the first hybrid system used in a full-size SUV.

At all times, the 2-Mode Hybrid system collects torque-based data, deciphers it, and then determines the most fuel-efficient means of propelling

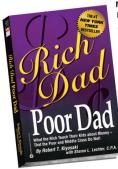

the vehicle.

This results in a number of wavs to save fuel such as: engine off at idle; electriconly propulsion to 48 km/h in light load conditions; electric boosting during acceleration blends with engine power to save fuel; cutting off fuel to the engine during vehicle deceleration; active fuel man-agement cylinder deactivation technology; and regenerative braking and engine speed and load control

The Silverado Hybrid has a fuel rating of 10.5L/100 km (27 mpg) city and 9.8L/100 km (29 mpg) high-

Big and brawny, but with a heart of green, the Silverado Hybrid does show that you can still get the job done while making this a better world.

Learn What the Rich Already Know About Money at Our FREE LOCAL EVENT DAD POO

My Poor Dad was educated and intelligent.

He completed four years of undergraduate work in less than two years. He then went on to receive his Ph.D... all on full financial

My Rich Dad never finished the eighth grade.

Both men were successful in their careers, working hard all their lives. Both earned substantial incomes.

Yet my highly educated dad struggled financially all his life and the other dad would become one of the richest men I had ever known. One died leaving tens of millions of dollars to his family,

charities, and his church. The other left a legacy of unpaid bills. Both men were strong, charismatic, and influential. Both men offered me advice, but they did not

advise the same things.

My two dads offered me the perspective of contrasting points of view: a rich man's view and a poor man's view. This forced me to think about, and ultimately choose, a new

way of thinking for myself. A way of thinking that assures financial security and prosperity! Now, through my books and workshops, I can share my mindset with anyone interested in mastering the Rich Dad® way of thinking – and use it to create true long-term wealth.

Youthful Lincoln

ROB BEINTEMA

After almost a hundred years of automotive history, it's easy to equate Lincoln with luxury. Which carries its own dangers of design inertia and hidebound tradition. **But Lincoln designers** seem to be aware that "tradition should be a guide, not a jailer." Especially in the face of increased competition in the premium class.

Lincoln continues to try to reinvent itself to appeal to a younger audience and a wider swath of the marketplace.

It's not an easy process. It requires the compromise of pleasing your regular fans with the familiar, while simultaneously trying to attract new buyers with novelty and innovation. The latest end result of that blended process the 2009 Lincoln MKS.

Central to the design, a striking double-wing grille, playing on Lincoln's traditional waterfall grille mo-

A palette of available interior colours and a long list of standard equipment are all found inside the 2009 Lincoln MKS.

tif, angles to the jewelstyled headlamps that wrap around the vented front fascia and flow into a sharp crease along the high beltline.

That high beltline is emphasized by the sweep of windshield, the elevated rear deck, and the deep seating and high console inside the car.

In a new age of tall wag-ons, CUVs and other crossover hybrid styles, the MKS sits and feels very much like a traditional car. still typically North American in style and spirit. But, then again, this ain't exact-

ly Grandpa's Lincoln.

A full suite of very modern available technologies includes:

 SYNC, a hands-free, voiceactivated hands-free in-car communication and entertainment system developed by Ford and Microsoft. The system integrates Bluetooth-enabled cellphones, your iPod, or other digital media players.

Intelligent Access with Push Button Start — a first for Lincoln - allows the driver to unlock the vehicle with the fob or touch the heat-sensitive keyless entry pad on the B-Pillar and start the engine with a push-button on the instrument panel.

tested, my frontwheel-drive model behaved civilly enough, wrig-gling with a little torque steer only under the hardest acceleration, pulling the MKS' somewhat porky 1872 kg (4127 lbs) of curb weight satisfactorily up to speed with a burly background roar. Fuel economy numbers vary according to sources but we'll go with the optimistic Canadian Energuide ratings of 12.9/8.8L/100km (city/hwy).

Opportunity

Porsche thrills

MARK ATKINSON for Metro Canada

When Porsche announced it was pulling out of most major auto shows, including February's Canadian International Auto Show in Toronto, it caused waves in the industry.

In an effort to thrill would-be customers into buying, the company decided to throw its full weight behind its World Roadshow, a travelling circus of Porsche vehicles and personnel that provides the ultimate test drive.

While this is the roadshow's 11th year, it's being held in Canada for the first time. The event kicked off last week at the Mosport International Raceway near Toronto and is scheduled to end this Friday.

The goal is to run 350 prospective buyers through a one-day program, in the hope, as one official put it, of spreading

"the Porsche virus."

The program involves different activities, ranging from performance testing a 911 Turbo Cabriolet, to using a Cayman S or Boxter S around a slalom course, to off-road driving with a number of Cayenne models, and, of course, lapping Mosport's challenging four-km circuit.

The machines in use to pound around the road course are a great mix of models, from a basic-but-focused 911 C2S with sport-chrono package and six-speed manual, to a more relaxed 911 Targa 4 with PDK, Porsche's new twin-clutch automatic gearbox.

There was a full-on track-oriented Cayman S with body-hugging one-piece sport seats, PDK and carbon brakes that was a real favourite on media day, while the bright-copper Cayenne GTS at the tail didn't hold anyone up, with the large SUV easily hitting 190 km/h up the Andretti Straight.

"The Porsche World

"(People) experience for themselves just what makes our vehicles so special."

Porsche Canada's Jasmin Rawlinson

Roadshow is a large, ambitious event," said Jasmin Rawlinson, Porsche Canada's director of marketing.

"Experience with the roadshow in other countries has proven the best way to sell Porsches is to put people behind the wheel. This way, they experience for themselves just what makes our vehicles so special."

Porsche Canada is hoping for to attract a good number of orders from the event, especially as "eighty-plus per cent of the people sent to the event have never owned a Porsche before," Laurance Yap, public relations manager for Porsche Canada, explains.

Porsche Canada allowed its would-be customers to test drive its models at the World Roadshow.

Exploring the Scottish countryside

Natural magnificence is the backdrop to this rural getaway

EMMA E. FORREST Metro World News

If a rugged wilderness with golden eagles soaring overhead and expansive mountain ranges sounds like a setting that's only on offer in North America, maybe it's time for you to experience the natural magnificence of rural Scotland.

Your adventure should start in London when you board the Caledonian Sleeper train. This overnighter is a magical experience — you step on at London's hectic Euston Station, have a few beers as you pass though England,

flyglobespan

put your head down in your cozy bunk, and when you're woken up with a cup of tea at 6 a.m., you find yourself in the wideopen Scottish countryside.

Our destination was Forest Lodge, a Victorian-era hunting lodge on the Atholl estate in Perthshire, in the heart of Scotland. The estate is also home to Blair Castle, which comes complete with suits of armour and hallways full of antlers, and is base to Europe's only private army,

the Atholl Highlanders.
We got out in picturesque Pitlochry — where we had to wait for the local taxi company to deliver kids to school before driv-

ing us 40 minutes through

the snow to the lodge.
Forest Lodge is like something out of an Agatha Christie movie, a huge white house nestled in the crook of the valley. Inside there are comfortable bedrooms, a dining room with a banquet table for 20, a huge kitchen and a living room with plump sofas, tartan curtains and an open fire.

This is an aristocratic weekend without the price tag — the cost of accommodation and food is small when shared, and there's nowhere to squander your hard-earned cash on fancy restaurants, expensive pubs or silly souvenirs.

There is no mobile phone reception, just an ancient payphone with a crackly line, so you are forced completely to switch off.

It pays to plan ahead -

there's no way to pop out for milk here. Calculate who's cooking what and you can have exactly what you need delivered by local grocers Tilt Stores. We arrived to find a larder bursting with fresh fruit, vegetables, meat reared on local farms, wine, and even some welcome snacks including shortbread and tablet, a sweet and tasty Scottish fudge that hits the spot after hitting the one of the local summits

Armed with an Ordnance Survey map that marks every contour of every elevation, we set off to conquer the nearby munro, the name for a Scottish mountain with a height over 910 metres. Hiking fanatics call it "munro bagging" as they try to tick all 284 munros off their list, but one was more than enough for us novices. The two-hour trek

Starwood Hotels & Resorts is moving ahead with a \$4 billion US overhaul of its core Sheraton name despite the economic slump. The initiative, begun in 2007, will bankroll new hotels and renovate existing rooms. REUTERS

A man walks near the harbour in Havana.

Can Cuba handle a tourism explosion?

The U.S. leisure industry could reap rich rewards if lawmakers relax Cuban travel bans, but industry experts warn that hurdles could block a big payday for cruise companies, hotels and airlines.

Last week, U.S. President Barack Obama opened a crack in the decades-old U.S. embargo against Cuba, allowing American telecommunications firms to start providing service for Cubans and lifting restrictions on family ties to the island — spurring hopes that loosened travel restrictions could be next.

But some observers expressed doubts about Cuba's ability to handle the potential deluge of thousands of U.S. tourists.

"The hype about U.S. tourism in Cuba far exceeds the existing infrastructure," said John Kavulich, senior policy adviser for the U.S.-Cuba Trade and Economic Council

cil.

The travel industry has long eyed Cuba as a desirable destination for American tourists. The country's capital city, Havana, is little more than 322 kilometres from Miami, the home base of two of the world's largest cruise ship operators, Royal Caribbean and

This project made possible b

the Alberta Governmen

"If you have a 2,000-passenger cruise vessel at the port of Havana, at some point they're going to want to have lunch."

John Kavulich

Carnival Corp.

A port in Cuba would be a boon for these companies as they can offer new trips at minimal fuel costs and jump-start demand for more cruises to the Caribbean, a key market.

European cruise operators have offered trips to Cuba for years.

Currently, Canada is the top supplier of tourists to the island, followed by Europe. In 2007, 660,000 Canadians visited Cuba.

Cruise lines will likely benefit first, some experts said, because it can take years to build up resort-style hotels on shore. Even so, capacity questions remain. "If you have a 2,000-passenger cruise vessel at the port of Havana, at some point they're going to want to have lunch," Kavulich said. "There are three restaurants — how are you going to feed 2,000 people at one time?"

The Iron Curtain: From 'death strip' to educational cycling trail

BERLIN Twenty years after the fall of the Iron Curtain, a project to convert the former "death strip" into a cycling path is picking up speed.

The new cycle trail, which will run 7,000 kilometres from the Barents Sea in the north to the Black Sea in the south, is aimed at promoting eco-

tourism along the former militarized zone and tapping into booming interest in cycling holidays.

Michael Cramer, a German Green party member of the European parliament, is spearheading the project to complete the trail. "Cycling tourism has seen double-digit growth each year for the past two

decades," said Cramer.
"With this trail we hope to
improve sustainable crossborder tourism and reduce
CO2 emissions in the
tourism sector."

Cramer said his inspiration came during a visit to Boston, MA in 1998. After seeing the Freedom Trail there, which connects important sites from the struggle for American independence, he thought the concept might work in Europe too. Like the Freedom Trail,

Like the Freedom Irail, Iron Curtain Trail route planners are linking historic sites and markers. Riders should experience a history lesson on the half-century division of the continent.

CityCenter, a \$9 billion development that was to become a 67-acre mini-metropolis of condominiums, hotels, shops and casinos in the middle of the Las Vegas Strip, is facing a funding crunch and an unclear future. REUTERS

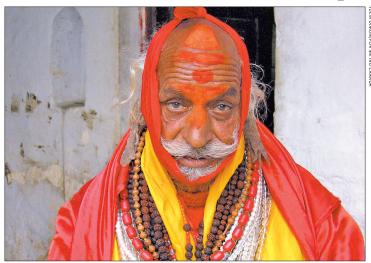

Choose from a selection of spiritual journeys

rom the tops of Machu Picchu, to the rose-red rock of Petra's canyonlike Siq, to the divinely-inspired churches of northern Ethiopia, there are plenty of places on earth that inspire. If you're looking for a holiday with a spiritual element, here are a few suggestions:

Korean retreat

Live like a monk at the Lotus Lantern International Meditation Centre. Located two hours from Seoul, this 12-year-old Buddhist temple was designed for foreigners looking to study the religious philosophy of Zen Buddhism. Visitors sleep on traditional Korean cots, wake up at the crack of dawn (3:45 a.m., to be exact), slip into itchy grey training suits, eat simple food, wash their

Rishikesh, a holy city in northern India, draws Babas, such as the one above, Hindu pilgrims and tourists looking for meaning.

own dishes and meditate many times a day.

Sun rise in Namibia

Bordering South Africa and Botswana, Namibia is where the Atlantic Ocean meets the desert, and where rich wildlife and traditional African culture

meet some of the world's most stunning sunrises. A popular tourist activity is climbing up Dune 45, one of Namibia's many natural sand castles. The hike along the ridge isn't easy, it's all worthwhile when you see the sun's warm, orange light illuminate the 80-million-yearold Namib Desert.

Get enlightened in India

Rishikesh, a holy city in northern India, is a place many travellers go to find themselves. It's a wildly popular spot on the banks of the Ganges River that

new-age hippies, young Israeli backpackers and wise Babas who spend their days in the lotus position. Located some 200 kilometres from Delhi, this selfproclaimed yoga capital of the world is packed with meditation centres, ashrams, Ayurvedic massage parlours, vegetarian restaurants and spiritual communities. With its nightly ceremonies along the river and vibe of collective spirituality, there's certainly something magical about Rishikesh.

Fountain of youth

For a look at the cradle of Incan civilization and a taste of her sacred waters, head to Isla del Sol on the shores of Bolivia's sacred Lake Titicaca. On the south end of the island, walk up 200 steps to a sacred spring that's said to be the fountain of youth. A sip of the rejuvenating water is not only refreshing, it's an important part of Incan tradi-tion. With a name that's sure to get grade-school kids giggling, Lake Titicaca is also the highest naviga-

- which means you may have difficulty differentiating between your own spiritual enlightenment and good old-fashion altitude sickness.

Awestruck underwater

Off the coast of Tofu beach, come face-to-face with some of the world's gentlest underwater giants. In an ocean safari offered by Bamboozi Backpackers lodge, tourists can swim alongside majestic manta rays, dolphins and even whale sharks, the world's largest living fish.

Fear not — despite their threatening size, whale sharks only eat plankton, not humans. Snorkeling with these prehistoriclooking beasts is a once-ina-lifetime opportunity that will leave you awestruck. Just keep a bottle of white vinegar handy in case of jellyfish stings.

For more information on swimming with whale sharks, visit bamboozi beachlodge.com

Earth hits big screen

New doc an impressive companion piece to BBC series

Director: Alastair Fothergill, Mark Linefield Stars: James Earl Jones and a variety of cuddly animals Classification: PG Rating: 🕮 🏶

PHIL BROWN for Metro Canada

Filmed at the same time as the BBC series Planet Earth, Alastair Fothergill and Mark Linefield's Earth is a remarkable achievement of nature documentary filmmaking.

The movie is filled with the beautiful cinematography that defined Planet Earth even if it isn't quite as intellectually satisfying.

It is impossible to watch

Earth without comparing it to its predecessor, and while the confines of a 90-

minute movie fund-ed by Disney prevents the filmmakers from capturing the depth of the series, this is still an impressive companion that piece demands to be seen on the big screen.

The longer run-

ning time and family-focus of this feature forced the filmmakers to construct a narrative out of the footage

captured for Earth. Fothergill and Linefield have structured their film

Pork with

Metro Recipe of the Day

Mustard Sauce INGREDIENTS: 1 tsp (5 mL) extra-virgin olive oil

- 4 boneless pork loin chops, 3/4 in. (2 cm) thick,
- trimmed of all fat 4 tbsp (60 mL) dry white wine or vermouth
- 1 garlic clove, minced 3/4 cup (175 mL) chicken
- or vegetable stock 2 tsp (10 mL) cornstarch mixed with 1 tbsp (15 mL)
- water 1/2 cup (125 mL) sour
- cream 1 tbsp (15 mL) Dijon mus-
- tard 1 tbsp (15 mL) chopped fresh tarragon Salt and fresh-ground black pepper

Fresh chives METHOD:

1. Heat oil in large nonstick frying pan over medium-high heat. Add pork chops and fry until brown, 3 minutes per side. Transfer to plate; set aside and keep warm.

- 2. Add wine or vermouth to pan with garlic and let bubble briefly. Pour in stock and boil 2 minutes. Stir together cornstarch mixture and sour cream until smooth. Add to hot cooking liquid, stirring well. Reduce heat and simmer, stirring constantly. until thick and smooth, 2 minutes. Stir in mustard and tarragon and season with salt and pepper to taste.
- 3. Return pork chops to sauce in the pan. Reduce heat to low, cover pan, and simmer until chops are cooked through, 4 to 5 minutes.
- 4. Arrange pork chops on warm plates and spoon sauce over. Garnish with
